

1. A 28-year-old woman presents with 3 weeks of low mood, fatigue, insomnia, and feelings of worthlessness. Which of the following is the most likely diagnosis?

- A. Adjustment disorder
- B. Major depressive disorder
- C. Persistent depressive disorder
- D. Bipolar I disorder
- E. Grief reaction

Correct Answer: B

Educational Objective: Diagnose major depressive disorder.

Correct Explanation: Patient meets DSM-5 criteria with 5+ SIGECAPS for 2 weeks.

Incorrect Explanations:

- A. Adjustment disorder requires an identifiable stressor within 3 months.
- C. PDD requires 2+ years duration.
- D. No manic episodes reported.
- E. Grief is not a disorder.

Review Pearl: MDD requires 5 of 9 SIGECAPS for at least 2 weeks.
